

Introduction to AI and ML

Dr. Shailesh Sivan

1

OVERVIEW

- Confused?
- What is machine learning?
- Programming vs Learning
- Machine Learning Pipeline
- When to use Machine Learning?
- ML Application
- Types of Learning

2

CONFUSED ?

3

3

COMPUTER SYSTEMS

- An electronics device
- Capable of storing and processing data
- Can be used for controlling other devices

4

ROBOTS AND COMPUTER

Are Computers Intelligent or Dumb ?

COMPUTERS ARE DUMB ☹ !

- Computer is not a magical device.
- It performs only those works which man can do
- But with very high speed and reliable accuracy.
- It has no any intelligence quality or thinking power

5

ARTIFICIAL INTELLIGENCE

Can We make Computers Intelligent ?

Yeah Of course !

+ Knowledge = **Artificial Intelligence**

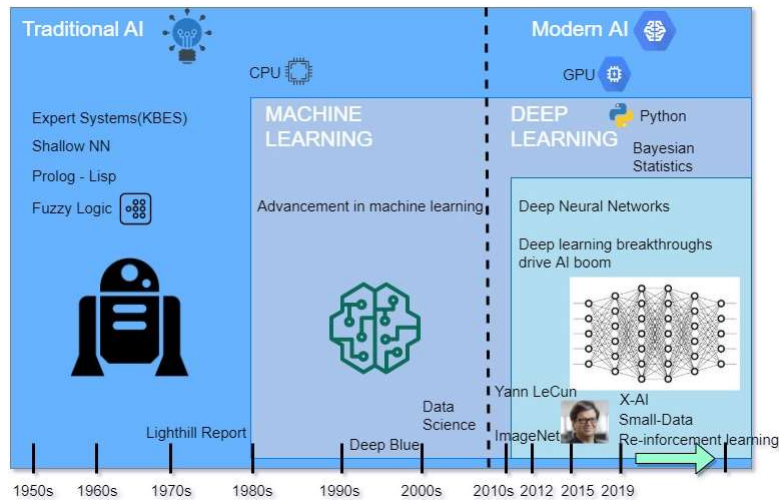

Artificial Intelligence is a scientific domain that deals with making intelligence to system

To make a system "think like a human"

6

ARTIFICIAL INTELLIGENCE

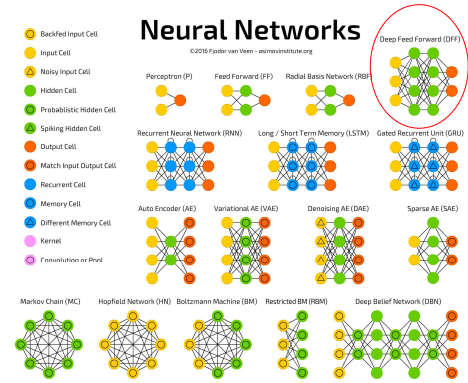

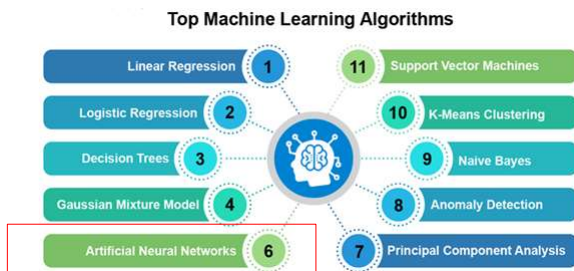

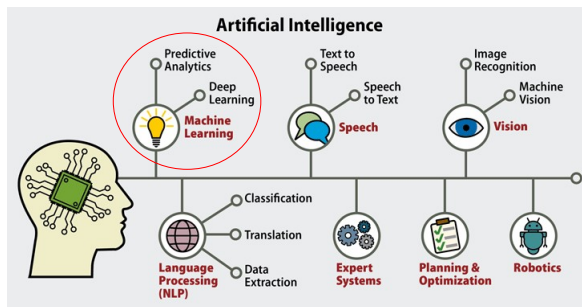

7

ARTIFICIAL INTELLIGENCE

Types of AI

8

9

CONFUSED ?

10

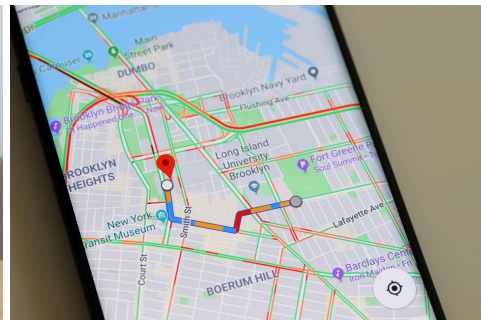

10

DATA SCIENCE

11

IS DATA IMPOTANT?

12

WHY DATA IS IMPORTANT ?

- Make Informed Decisions
- Get The Results You Want
- Find Solutions To Problems
- Back Up Your Arguments
- Be Strategic In Your Approaches
- Keep Track Of It All
- Know What You Are Doing Well

DATA IS NEW OIL

13

REALITY ABOUT DATA

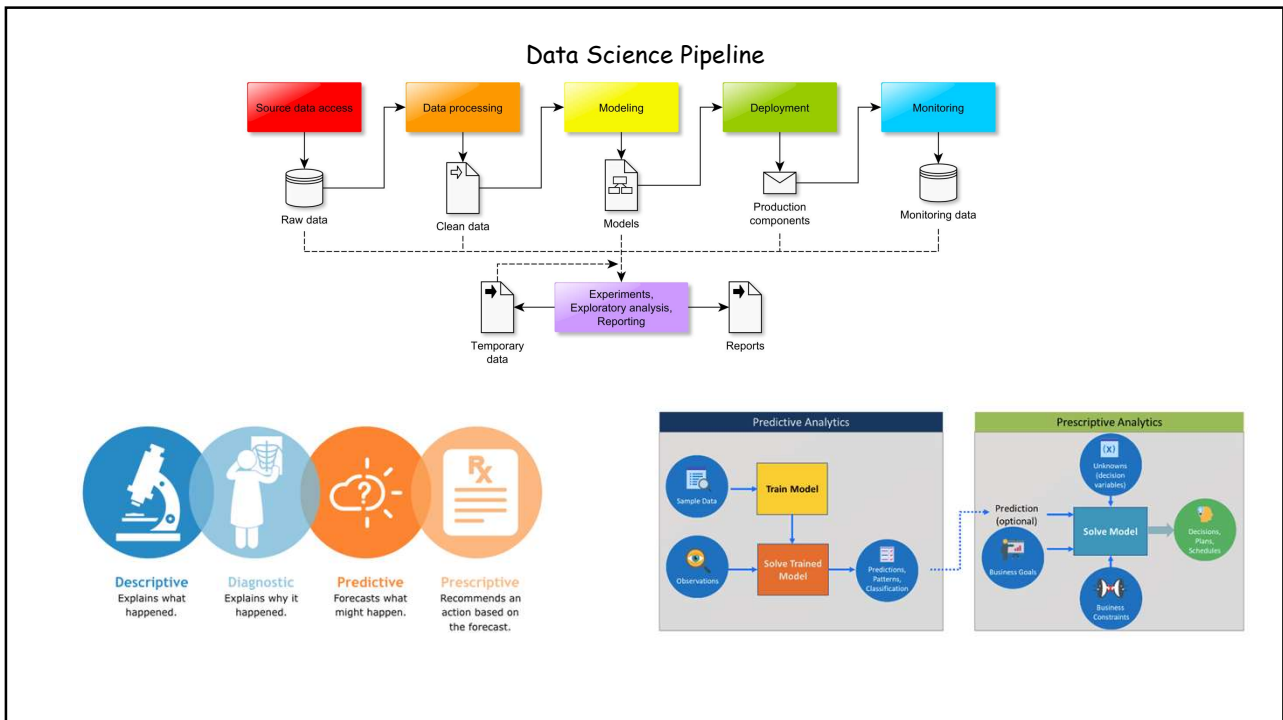

We are now **drowning** in data ! but **starving** for insights ☹

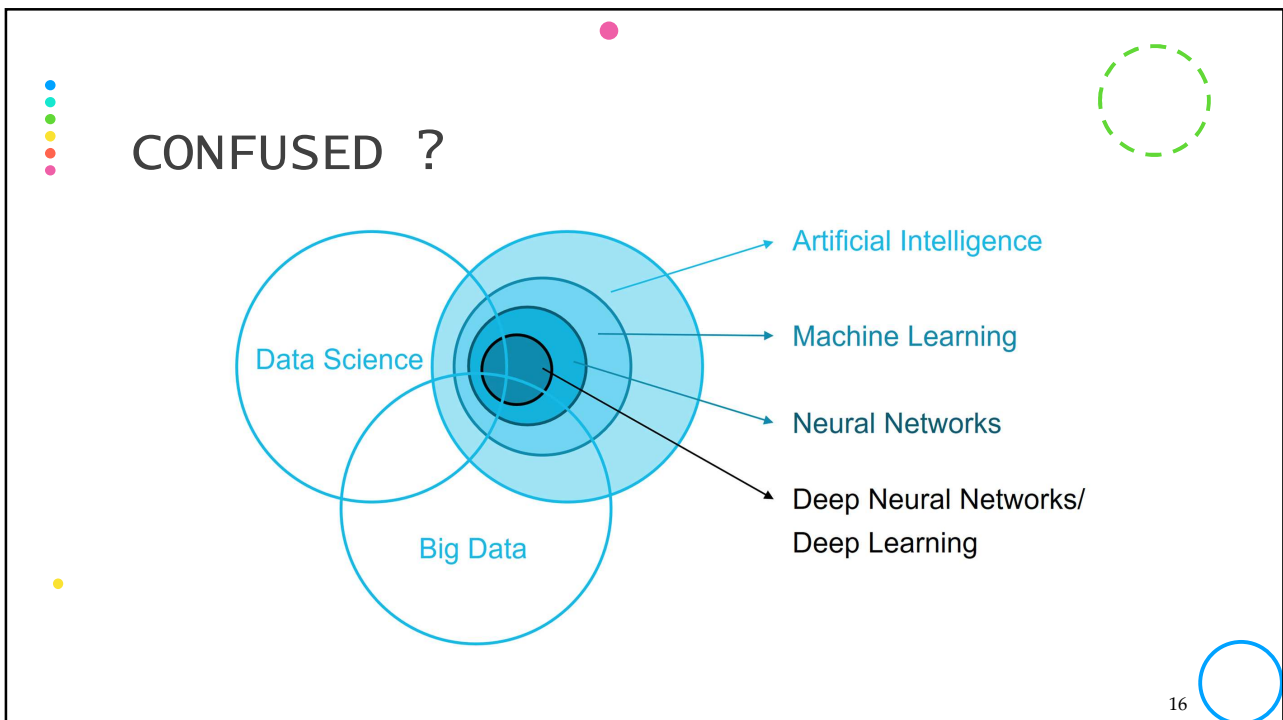

SOLUTION ?

14

15

16

Big Data

Sensor data from a cross-country flight

Properties of Bigdata

Is Big Data = Large Data ?

17

Big Data

18

WHAT IS MACHINE LEARNING?

"Learning is any process by which a system improves performance from experience."

- Herbert Simon

Definition by Tom Mitchell (1998):

Machine Learning is the study of algorithms that

- improve their performance P
- at some task T
- with experience E .

A well-defined learning task is given by $\langle P, T, E \rangle$

19

19

This is a shirt we used to wear.

Color: Green
Size : Large
Type : Formal

Is this a shirt ?

Ok

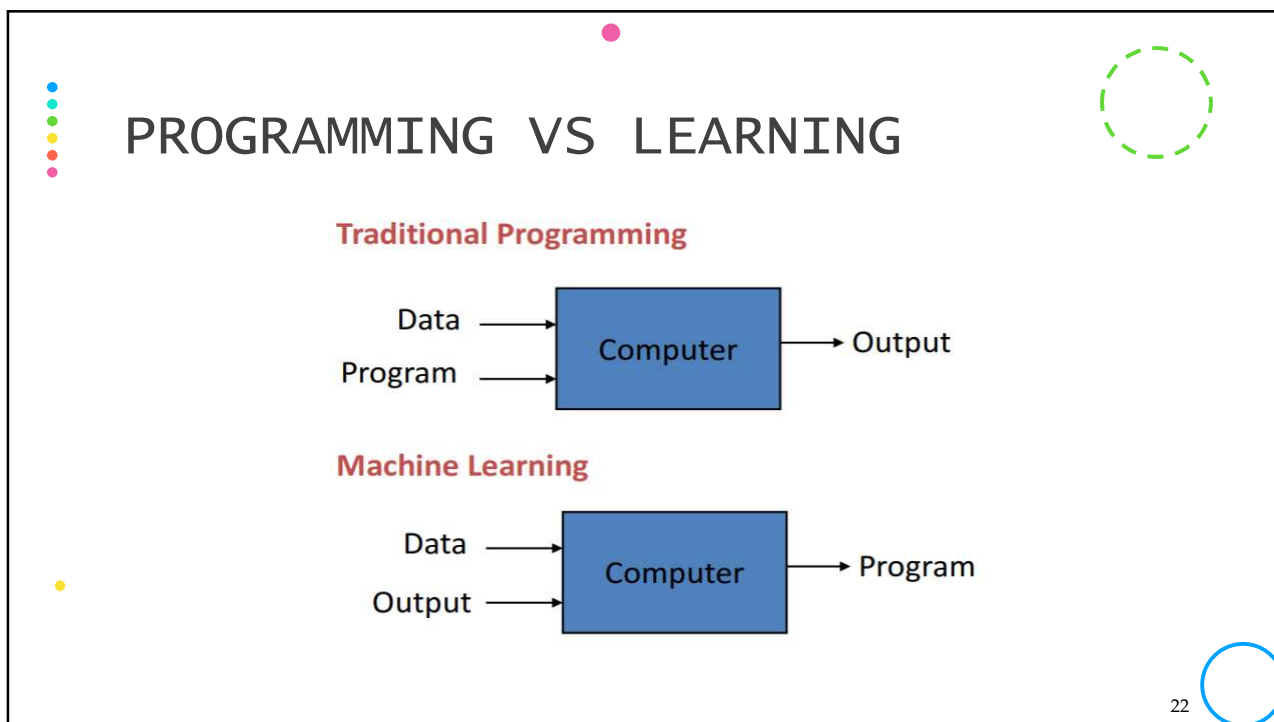

Color: Green, red
Size : Large, small
Type : Formal, casual

This is also a shirt

20

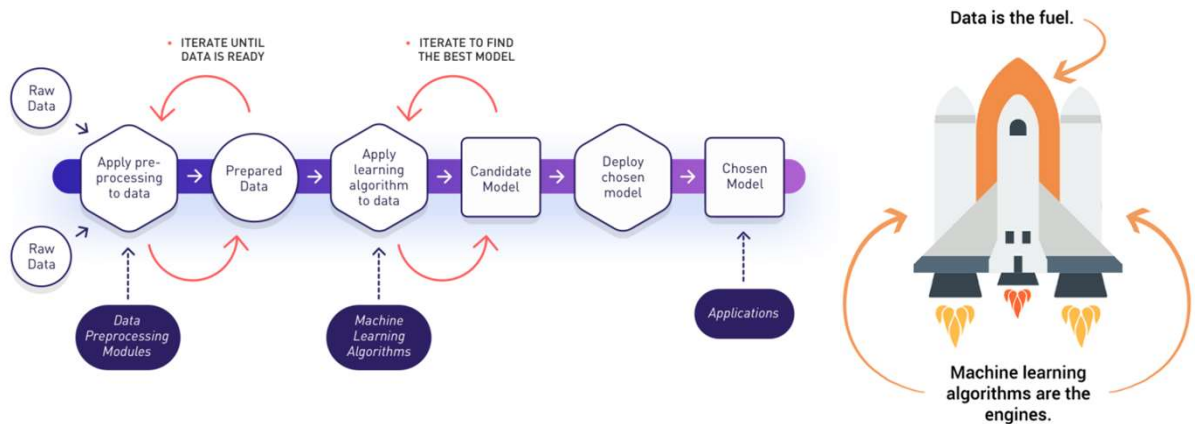

21

22

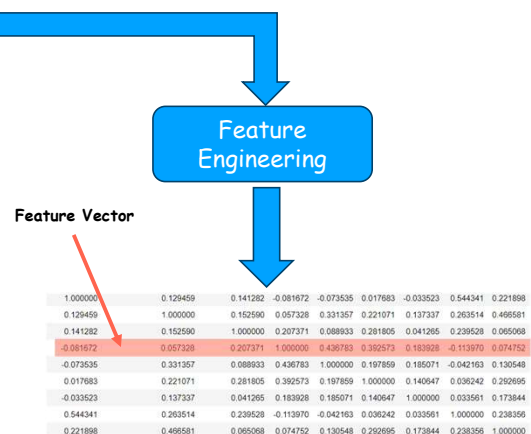

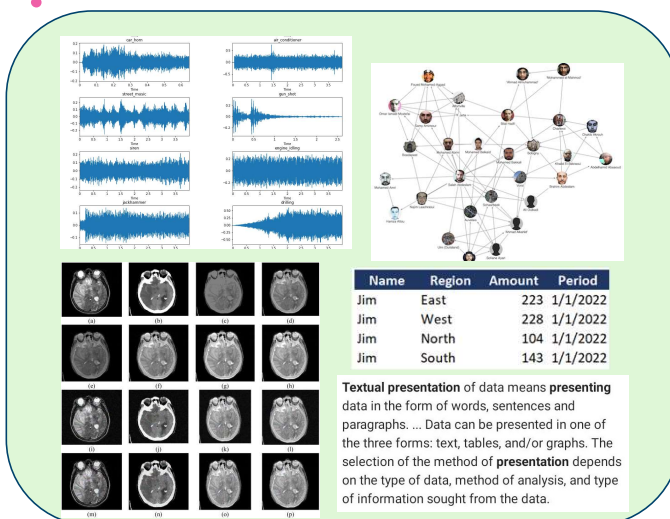

MACHINE LEARNING PIPELINE

23

DATA AS FEATURE VECTORS

Raw Data

24

WHEN TO MACHINE LEARNING?

ML is used when:

- Human expertise does not exist (navigating on Mars)
- Humans can't explain their expertise (speech recognition)
- Models must be customized (personalized medicine)
- Models are based on huge amounts of data (genomics)

Learning isn't always useful - There is no need to "learn" to calculate payroll

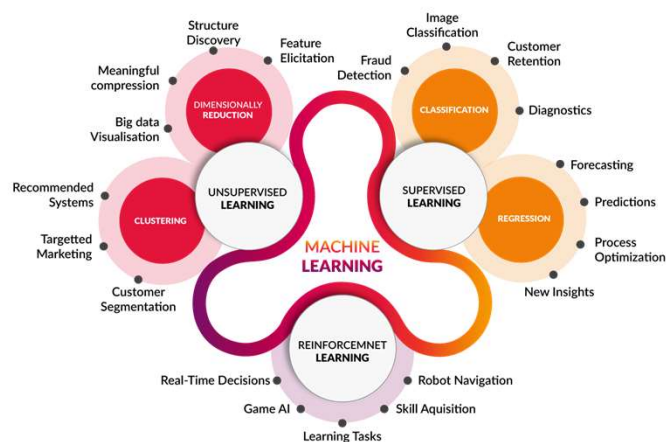

25

25

TYPES OF LEARNING

26

26

SUPERVISED LEARNING

Input : Labeled Data

X (features)	Y (labels)
$x_{11}, x_{12}, x_{13}, \dots, x_{1n}$	y_1
\vdots	\vdots
$x_{k1}, x_{k2}, x_{k3}, \dots, x_{kn}$	y_k

Goal : Construct a predictor $f : X \rightarrow Y$

to minimize the error between \hat{Y}, Y
where, $\hat{Y} = f(X)$

Use : using predictor to predict $\hat{y} = f(\hat{x})$

For the unknown input \hat{x}

27

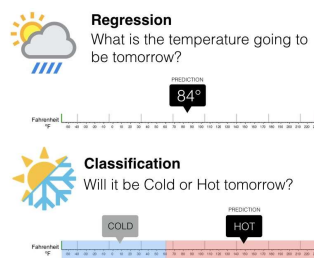

27

SUPERVISED LEARNING

Classification

- features and discrete labels
- maps an input to discrete label(class)
- Eg: spam or not, type of cancer

Regression

- features and continues real values
- Predict a real value for an input
- Eg: gold price, temperature

28

28

UNSUPERVISED LEARNING

Input : Unlabeled Data

X (features)
$x_{11}, x_{12}, x_{13}, \dots, x_{1n}$
\vdots
$x_{k1}, x_{k2}, x_{k3}, \dots, x_{kn}$

Goal : Construct an analyzer to find the relationship between inputs

$x_1, x_2, x_3, \dots, x_k$

Use : Group or associate inputs according to their similarity

29

29

UNSUPERVISED LEARNING

Clustering

ID	Items
1	{Bread, Milk}
2	{Bread, Diapers, Beer, Eggs}
3	{Milk, Diapers, Beer, Cola}
4	{Bread, Milk, Diapers, Beer}
5	{Bread, Milk, Diapers, Cola}
...	...

market basket transactions

{Diapers, Beer} Example of a frequent itemset
 {Diapers} → {Beer} Example of an association rule

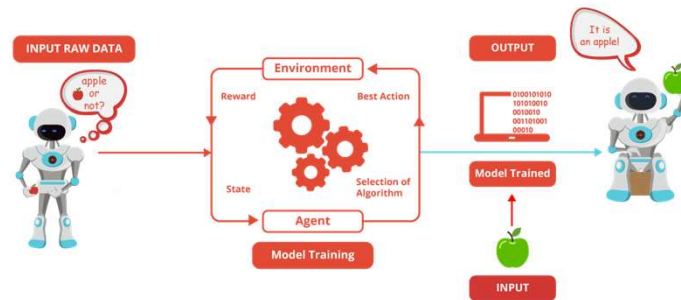

Itemset and rule mining

30

30

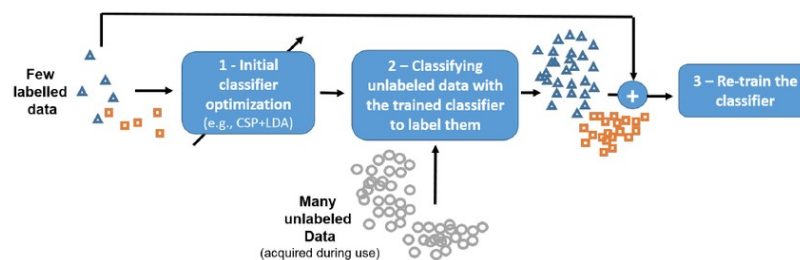

REINFORCEMENT LEARNING

- Use software agents
- Based on rewards
- Objective is to maximize rewards for better learning

31

SEMI SUPERVISED LEARNING

In a nutshell, semi-supervised learning (SSL) is a machine learning technique that uses a small portion of labeled data and lots of unlabeled data to train a predictive model

32

A slide with a white background and a black border. In the top left corner, there is a vertical line of five colored dots (blue, green, yellow, orange, red). In the top right corner, there is a dashed green circle. In the center, the words "THANK YOU!" are written in large, white, bold, sans-serif capital letters, surrounded by a cluster of colorful squares in various sizes and colors (blue, green, yellow, orange, red, purple, pink). Below the text, on the left, are three icons: a person icon, a phone icon, and an envelope icon, each followed by text. To the right of the icons is a QR code. In the bottom right corner, there is a solid blue circle.

THANK YOU!
